

Access Networks Introduces...

The network can be the most challenging part of a project. Based on this need, Access Networks introduces ACE –

an **Access Networks Certified Expert.**

The Access Networks' ACE training program provides attendees the technical concepts and skills needed to confidently deploy and troubleshoot robust, reliable, enterprise-grade networks.

What is the program?

As a pre-requisite to the in-person lab, ACE students are required to complete the "Networking Fundamentals" training through the Access Networks online learning portal. Once the ACE student has completed and passed this series of online lessons, they will attend a one day, in-person training session and lab in their area.

What's the in-person training session & lab like?

The first half of the day, we encourage not only ACE students, but members of the sales and design teams to join for coffee and an informative session on product information, best practices for design, the basics of Wi-Fi and sales tactics.

ACE Students will begin a hands-on lab after the lunch break. During this lab, each student will have an independent work station. Each student is required to bring a laptop.

Some of the topics covered during this lab are:

1. Advanced Wireless LAN Concepts
2. ZoneDirector LAB
3. General Custom System Deployment Training
4. General Custom Troubleshooting

*Once this lab has been completed, these ACE Students are officially an **Access Networks Certified Expert!***

The ACE Program costs \$250 to participate. Once the online training and lab session are finished, the student will walk away with an official certificate, t-shirt and sponsoring company has the choice of an Access Networks A510 access point or a \$450 account credit!

ACE Training Registration

When: Tuesday, January 29th from 8am - 4:30pm

Where: Atlantic Integrated Headquarters
